

Guidelines for Preparing an Abstract for Your Project

Elements to Include in the Abstract

1. Theme

Your abstract must clearly mention the theme under which your project falls. This ensures that your project aligns with one of the official themes of the Tech-Expo

The themes for the junior and senior categories are mentioned below.

2. Objective

Begin your abstract by clearly stating the objective or the primary rationale behind your project. This section introduces the reader to the issue or problem you aimed to address, serving as the foundation for the research you conducted.

3. Methods

Following the objective, describe the methodology used to explore the issue or solve the identified problem. This part should briefly outline the approach, tools, techniques, or procedures implemented during the research process.

4. Results

Present the key findings or outcomes of your research. This section should highlight the most important results that emerged from your study.

5. Conclusion

Conclude your abstract by summarizing the significance of your results. Reflect on what these findings mean in the context of the problem and provide any insights or implications that emerged from your research.

Project Themes

This year, the Tech-Expo will follow a theme-based approach. Every abstract must include the theme of the project. Ensure your project aligns with one of the following themes:

Junior Category

- Smart City & Sustainable Development
- Artificial Intelligence & Machine Learning
- Robotics & Automation
- Environment & Climate Change
- Agriculture & Food Technology

Senior Category

- Robotics & Aerial Robotics
- Sustainable Development
- Social Impact & Inclusion
- Electric Vehicles (EV) & Transportation
- Agriculture & Food Technology

Techexpo

Steps for Writing the Abstract

- **Step 1:**

For the *Objective* and *Conclusion* sections of your abstract, refer to the introduction and conclusion of your full research paper. Extract the most essential points to ensure consistency and relevance.

- **Step 2:**

The *Methods* section should briefly describe the process or strategy used to investigate the research question. Focus on conveying how you approached the problem without delving into excessive detail.

- **Step 3:**

After drafting your abstract, review it carefully to ensure consistency between the information in the abstract and the main body of your project. The abstract should accurately reflect the content and findings of your research.

- **Step 4:**

Proofread your abstract thoroughly to eliminate grammatical, structural, or factual errors. A polished and error-free abstract enhances clarity and professionalism.

Important Note:

Ensure that any images included in your abstract are of high quality and clear enough to be easily understood by readers.
